

SLOPE API

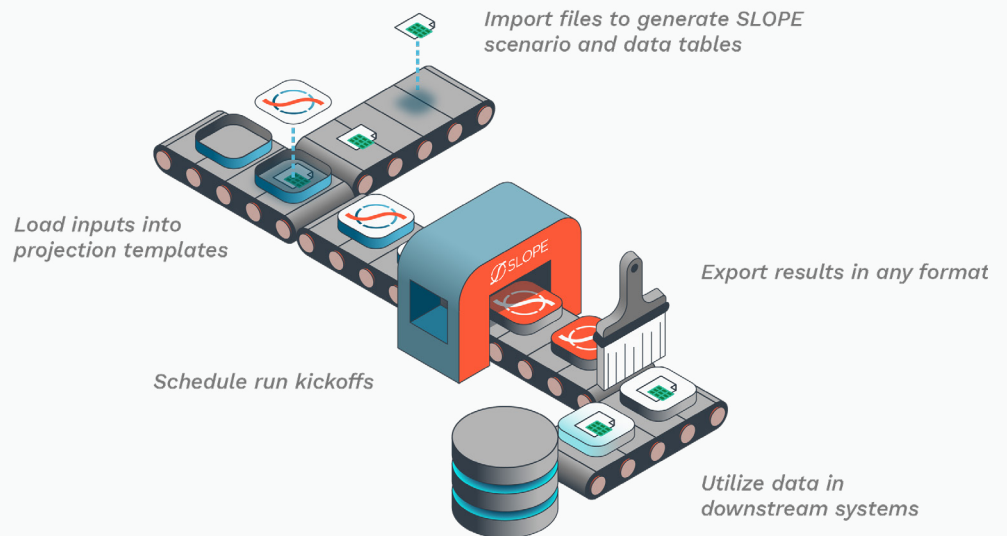

```
28
29
30 def run():
31     api_client = slope_api.SlopeApi()
32
33     api_client.authorize(api_key, api_secret)
34
```

**AUTOMATION,
MADE POSSIBLE**

Automate the **full valuation workflow** including the ingestion of files for the creation of scenario and data tables, upload of model point files, creation of projections from templates and kicking off a run.

Check the status and pull results back down to **integrate into downstream systems**.

HOW SLOPE'S API WORKS

KEY TECHNICALS

- RESTful architecture accessible by all modern programming languages capable of making web requests (Python, Java, C# and Javascript, etc).
- Read and write data to SLOPE application to fully automate business workflows.
- TLS 1.3 security for maximum data safety and integrity.
- Sample scripts available in Python, Java and C#
